SUMMARY

A Broadcast Systems, Media, and Automation Engineer with 16 years of experience, specializing in Master Control Room operations, system support, and broadcast IT, currently supporting 31 channels across television, radio, streaming media, cloud and OTT platforms. Skilled in automation, media acquisition, playout, networking and tool building. Adept at maintaining high-availability broadcast operations, optimizing system workflows, and delivering reliable technical support in fast-paced media environments.

SKILLS

Broadcast Operations: Multi-channel playout support, Master control room (MCR) operations (Video routing and switching, audio and video processors, graphics systems, video server), Livestreaming, Broadcast automation (Etere), Signal acquisition (Satellite, fiber, studio feed and IP), Video and audio quality control (Monitoring and measurement)

Media Asset Management: Ingest, Transcode, Archiving and restoration, Datamover workflows

IT and Infrastructure: Windows administration, Virtualization, Networking, Broadcast IT systems

Incident Handling: 24/7 incident response and escalation, Logging and reporting, Analysis, Investigation and resolution

Systems and Process: Broadcast system design, Installation, Testing and commissioning, Preventive and corrective maintenance, Vendor coordination, Business continuity process

Development and Automation: Node.js, Express, Python, JavaScript, HTML/CSS, REST API integration, FFmpeg, WebRTC, yt-dlp, LDAP/Active Directory authentication, Windows services, Power Automate

Cloud and Media Delivery: AWS Elemental Live, AWS S3, IBM Aspera, IP video monitoring and multiviewers

PROFESSIONAL EXPERIENCE

ABS-CBN Corporation – Quezon City, Philippines
TOC System Engineer & Master Control Room Engineer
Dec 2011 - Present

TOC System Engineer

- Sustained well above 99% program continuity across multi-channel playout systems and TOC workflows by delivering proactive technical support for video servers, broadcast automation, routers, and core broadcast and IT infrastructure.
- Streamlined media operations by executing end-to-end workflows - including archiving, transcoding, and rapid video server restoration to guarantee on-time playout delivery.
- Modernized core broadcast infrastructure by designing and implementing scalable system enhancements that expanded operational capacity and aligned workflows with emerging industry technologies.
- Optimized multi-channel playout functionality by precisely configuring core broadcast software and hardware, including automation systems, video routers, frame synchronizers, logo inserters, and graphics engines.
- Accelerated incident resolution by systematically analyzing device logs and applying rapid technical troubleshooting across core broadcast hardware and software.
- Streamlined vendor support operations by managing key supplier relationships for product inquiries, technical configurations, and high-priority escalations.

Master Control Room Engineer

- Oversaw technical operations and maintenance for the station's core facility infrastructure, sustaining high-availability systems and minimal unplanned downtime.
- Secured high-reliability ingest across studio, satellite, fiber, and IP feeds from internal and external production facilities to guarantee uninterrupted media acquisition through precise routing and switching aligned with tight production schedules.
- Maintained strict broadcast compliance and signal integrity across 31 channels in 24/7 operations through continuous audio/video measurement and rapid application of emergency restoration procedures with no compliance-related violations recorded.
- Deployed and commissioned critical broadcast hardware and systems on schedule, enhancing baseline system capabilities and operational reliability.
- Minimized equipment failures and maintained uninterrupted business continuity in high-availability operations.
- Performed critical ad-hoc technical tasks, ensuring uninterrupted workflow continuity during peak demands and unexpected operational shifts.

Cablelink and Holdings Corporation – Parañaque City, Philippines

Headend Technician

Sep 2010 - Nov 2011

- Sustained signal compliance and optimal audio/video transmission levels across all cable channels through continuous monitoring and precise calibration, reducing signal degradation and preventing compliance-related interruptions.
- Maximized signal strength and reception quality by keeping satellite dishes aligned to optimal parameters across all downlinks. Simultaneously upgraded headend facility efficiency by modernizing structured cabling, reorganizing channel groups, and establishing an accurate physical asset inventory.

PROJECTS

IP and Cloud Playout Multiviewer with Recorder - Used daily by MCR as browser-based multiviewer tile wall for IP feeds and all cloud playout channels operated by TOC for broader monitoring coverage. This eliminated the necessity to purchase an enterprise-grade multiviewer. Built using Node.js, JSON, FFmpeg, MediaMTX.

Compliance Recording Launcher, Tape On Air Service and Automatic Uploading for Regional Stations - Used by the Sales team for "proof of airing" and dispute resolution. TOC HQ and Regional stations upload the recordings to a NAS and served over a web app for access-gated viewing, trimming and export with watermarking. This eliminated the purchase of expensive Tape-On-Air solutions across several regional sites. Built using Node.js, JSON, FFmpeg, HTML, IBM Aspera SDK.

TOC Media Converter, Closed Caption Viewer - Used by TOC to transcode a range of file formats into broadcast-compatible playable files using broadcast-specific presets and a clean browser UI. CC Viewer is used to preview embedded closed captions (EIA-608 or EIA-708) as part of broadcasting compliance and standard prior to material processing. Built using Node.js, FFmpeg, HTML.

Daily Operations Log Verification App, Playlist and Report Live Service - Prevents mismatches between generated playlist from the traffic system and the uploaded automation playlist by letting operators check, verify and flag discrepancies prior to airing to prevent missed spots leading to revenue loss. Live playlist generation with daily runs and Production Guide report delivered via e-mail, MS Teams chat or SharePoint, automated using Power Automate. Built using Node.js, HTML.

Livestream Encoder Monitoring Panel - Browser-based dashboard panel for livestream encoder node health, running events and operational status at a glance. Livestream alerts and health are monitored using web callback URL by the encoders. This project allows the MCR to immediately act on streaming issues that may cause viewer-facing stream degradation. Built using Node.js, Express, REST callbacks.

ABS-CBN TOC Multi-Channel Playout and Multi-Session Ingest - The project innovated legacy playout systems by supporting multiple playout channels in a single facility which improved operator efficiency. My responsibilities included setup, installation, configuration, testing and operator training.

ABS-CBN TOC Video Router Migration - The project replaced the old SDI video router to meet the requirements of TOC expansion. This project was in conjunction with the multi-channel playout and multi-session ingest projects that enabled a high-density playout facility.

ABS-CBN TOC Video Server Migration - The project replaced the old video server as part of the TOC facility upgrade. This led to several channel enhancements such as HD capability and closed captioning support. My responsibilities included setup, installation, configuration, and testing.

TRAININGS AND SEMINARS

CompTIA CySA+ (2025)
Windows Server 2019 - Administration & Automation (2025)
Amagi CloudPort and Amagi Live Essentials (2024)
Analytics Applications in Operations (2024)
AWS Elemental Live - Advanced (2024)
Computing in Python (2024)
Dashboards and Drill-Down Analytics (2024)
Data Visualization Fundamentals, Microspecialization, Using Tableau and Python (2024)
Essential Excel Skills for Data Preparation and Analysis (2024)
Getting Grounded on Analytics (2024)
Operational Analytics Microspecialization Pathway (2024)
Storytelling Using Data (2024)
Foundations: Data, Data, Everywhere (2023)
Google Crash Course on Python (2023)
Alibaba Cloud Associate - Cloud Computing (2022)
SP101 - Development Academy of the Philippines (2022)
Six Sigma Yellow Belt (2022)
Project Management Fundamentals (2021)
Microsoft Azure Fundamentals - AZ-900 (2020)
Cisco CCNA v3 Bootcamp (2017)
Etere Automation - Advanced (2017)
VMware vSphere 6.0 (2017)

EDUCATION

University of Santo Tomas
B.S. Electronics and Communications Engineering
Jun 2005 - Mar 2010
